This statistical reference presents analytical tables showing current and historical data on U.S. foreign trade in agricultural products. Detailed tables cover commodity and country information for the most recent 2-year period.

U.S. foreign agricultural trade statistics in this report were derived from official data released by the Bureau of the Census. Agricultural commodities are defined as (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture, such as raw hides and skins, fats and oils, beer, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such by the U.S. Customs Bureau.

Exports

The export data in this report include "exports of domestic merchandise", defined as commodities **grown, produced, or manufactured in the United States, and commodities of foreign origin** which have been changed from the form in which they were imported. The export value is generally equivalent to a free-alongside-ship (f.a.s.) value at the U.S. port of export, based on the transaction price including inland transportation, insurance, and other costs incurred in placing the merchandise alongside the carrier.

The country of destination is defined as the country of ultimate destination known to the exporter at the time it is exported. When the ultimate destination is not known, shipments are credited to the last known country. A significant part of U.S. agricultural shipments to some countries is not known to the exporter at the time of departure. Transshipment through transfer facilities in Canada and Western Europe results in overstatement of export data to the Netherlands, Belgium, and West Germany, and understates exports to many other countries. Supplementary tables at the end of this report provide information on transshipments by destination based on statistics acquired from foreign sources including the Canadian Grain Commission, the Netherlands Central Bureau of Statistics, the Belgian National Institute of Statistics, and the Hamburg (West Germany) State Statistical Office.

Changes in the Schedule B classification system on January 1, 1978 required the regrouping of many commodities to maintain historical comparability. A number of new commodity classifications were established in the revised Schedule B system, and a completely new Schedule E based on the Standard International Trade Classification (SITC) system introduced. The user is encouraged to refer to U.S. Bureau of the Census publication Statistical Classifications of Domestic and Foreign Commodities Exported from the United States, January 1, 1978 edition, which cross-indexes old and new export categories.

Agricultural exports under specified Government-financed programs (table 8) include shipments under programs authorized by Public Laws 83-480, 87-165, 665, and 195. Commercial exports include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) extension of credit guarantees for relatively short periods repayable in dollars plus interest by USDA's Commodity Credit Corporation, and Export-Import Bank loans and medium-term loan guarantees; (2) sales of Government-owned commodities at less than domestic market prices; and (3) export payment assistance.

Apparent excesses of exports under specified Government programs over total exports, which result in negative values in the column "Agricultural exports outside specified Government programs," may be due to lags in reporting, differences in valuation procedures, or the recording of the export as destined for the country through which a transshipment was made.

In commodity group-by-country data (table 9), 7-digit Schedule B commodity codes were summed to group totals. Each of the countries listed under each group accounted for 0.3 percent or more of the commodity group's export value with the following exceptions: Wheat, rice, feed grains, grains and preparations, corn, wheat and wheat products, grain sorghums, wheat and wheat flour, feed grains and products, and nonfat dry milk were listed if they accounted for 0.1 percent or more.

Commodity-by-country data (table 10) are printed at the 7-digit Schedule B commodity code level. Statistics on commodities valued under \$1 million are not shown, but are available for reference from Agricultural Specialist machine tabulations in the International Economics Division, World Analysis Branch, Economics, Statistics, and Cooperatives Service, U.S. Department of Agriculture. So-called "basket" classifications (28 commodities) were excluded because they consist of diverse items and do not provide for analytical clarity. Countries listed under commodity headings were selected on a percentage of commodity export values as follows:

(1) Commodities having an export value from \$1 million to \$5 million show countries accounting for 5 percent or more; (2) Commodities with export value from \$5 to \$20 million show countries accounting for 2 percent or more; (3) Commodities with export value of \$20 to \$50 million show countries accounting for 1 percent or more; and (4) Commodities valued over \$50 million show countries accounting for 0.3 percent or more. The value of commodities to selected countries was subtracted from each commodity total to derive "other countries."

Imports

Import data consist of "imports for consumption", representing entries for immediate consumption and withdrawals from bonded warehouses. The import value is defined as the "Customs value", based on the foreign market value, export value, or constructed value, and excludes U.S. import duties, freight, insurance, and other charges incurred in moving the commodity to the U.S. port of entry.

Data on shipments valued at less than \$251 are not shown in individual commodity listings or in agricultural totals. Low-valued imports are placed in "basket" classifications and appear in nonagricultural import totals.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further information on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.

In commodity group-by-country data (table 21), 7-digit TSUSA commodity codes were summed to group totals. Countries listed under each group accounted for 0.3 percent or more of the commodity group's import value with the following exceptions: Bananas and plantains, green coffee, cocoa beans, crude rubber, pork, and raw sugar were listed if they accounted for 0.1 percent or more.

Commodity-by-country data (table 18) are printed at the 7-digit Schedule A commodity code level. Basket classifications (31 commodities) were excluded. Countries listed under commodity headings were based on a percentage of commodity import values as follows:

(1) Commodities having an import value from \$1 million to \$5 million show countries accounting for 5 percent or more; (2) Commodities with import values from \$5 to \$20 million show countries accounting for 2 percent or more; (3) Commodities with import values of \$20 to \$50 million show countries accounting for 1 percent or more; and (4) Commodities valued over \$50 million show countries accounting for 0.3 percent or more. The value of commodities from selected countries was subtracted from each commodity total to derive "other countries."

Country-by-commodity data (table 19) cover countries accounting for import totals of \$1 million or more. The value of commodities imported from each country was summed and listed for the country of origin at a 5-digit Schedule A level if the commodity total was 0.3 percent or more of the agricultural imports from that country, with the following exceptions: Commodities from Canada, Mexico, Brazil, Argentina, and Australia are listed if they account for 0.1 percent or more. Value of selected commodities was subtracted from each country total to derive "other agricultural products."
